

AI Agents Are Navigating Websites **Blind.**

The web was built for humans. AI agents have no native map.

No Structural Intelligence

AI agents have no pre-compiled knowledge of site routes, elements, controls, or workflows. Every session starts from zero.

Zero Interaction Precision

Without a pointer map, AI guesses at buttons, forms, and CTAs — causing failures, retries, and costly errors.

Perpetually Brittle

Manually coded site knowledge breaks every time a page changes, a form moves, or a workflow updates. There is no automated fix.

There is no system today that compiles complete, verified, **ORB-ready** website intelligence automatically. **Until now.**

The Second Talkie Revolution.

History does not repeat. It rhymes. And it runs on a 33-year clock.

1895 → 1927 | CINEMA FINDS ITS VOICE

1895 — THE LUMIÈRE BROTHERS

The first silent film is projected. Cinema is born — visual, kinetic, captivating. But **the screen cannot speak**. Audiences watch in wonder as images move in silence.

32 YEARS OF THE SILENT ERA

Silent film grows into a global art form. Studios build empires. Stars become icons. Storytelling matures. And yet — something profound is missing. **The screen sees everything. It can say nothing.**

1927 — THE JAZZ SINGER

Warner Bros. releases The Jazz Singer. A voice comes out of the screen. The audience goes still — then erupts. Within 36 months, silent film is commercially extinct. **A 30-year industry vanishes almost overnight**. The talkie does not improve cinema. **It redefines what cinema is.**

"You ain't heard nothin' yet." — First words spoken in a commercial sound film, 1927

1993 → 2026 | THE WEB FINDS ITS INTELLIGENCE

1993 — THE FIRST GRAPHICAL WEB

Mosaic launches. The web is born — informational, hyperlinked, navigable. But pages cannot understand you. They cannot respond. They cannot guide. **The web, like early cinema, is silent.**

33 YEARS OF THE SILENT WEB

The web becomes civilization's infrastructure. Billions of pages. Trillions of links. Entire economies built upon it. And yet — a website in 2010 still cannot hold a conversation. It presents. It waits. **The silent web has no voice.**

2026 — ORB WEAVER ARRIVES

For the first time, a website can be fully mapped, understood, and intelligently navigated by an AI that knows every route, every control, every workflow. **The page does not just display — it communicates. It responds. It guides.** The silent web ends. **The intelligent web begins.**

The second talkie is not audio. It is agency. It is intent. It is the web that finally understands you.

1895 → 1927 = 32 years. 1993 → 2026 = 33 years. The same generational arc. The same category-defining rupture. The same overnight extinction of what came before. **ORB Weaver is not a feature. It is the moment the web learns to speak.**

Scan. Compile. Deploy.

Three stages. One complete Site Intelligence package, ready for any ORB-powered AI agent.

STEP 01

SCAN

ORB Weaver dispatches **220+ scan types** across every layer of a target website — structure, navigation, UI elements, accessibility, content, flows, brand, schema, and more. Nothing is left undiscovered. Every control, route, pointer target, and workflow is mapped.

STEP 02

COMPILE

All scan data is normalized, deduplicated, cross-referenced, and compiled into a **Site World** — a structured knowledge graph, pointer manifest, route capsule set, and workflow map. Fully versioned, timestamped, and confidence-scored.

STEP 03

DEPLOY

The compiled ORB intelligence package is delivered as a **structured deployment artifact**. Any ORB-powered AI receives complete site knowledge instantly — no guessing, no custom coding, no integration work.

Where Three Exploding Markets Converge.

ORB Weaver sits at the intersection of AI infrastructure, web automation, and enterprise knowledge management.

\$47B

AI Agent & Autonomous Workflow Market by 2030

Fastest-growing segment in enterprise software infrastructure

CAGR 43%

1.97B

Live websites worldwide

Each requiring structured, AI-navigable intelligence to function with autonomous agents

\$29B

Robotic Process Automation & Web Automation Software Market, 2026

Scaling rapidly as enterprises demand full-stack workflow orchestration

\$18B

Enterprise Knowledge Graph & Structured Intelligence Market by 2029

Enterprises investing heavily in verified, queryable intelligence at scale

Every AI agent platform, every enterprise automation stack, every customer-facing deployment needs what ORB Weaver produces: **verified, structured, deployment-ready site intelligence.** We are the intelligence layer the agentic web is missing.

220+ Scan Types. 14 Intelligence Categories.

The most comprehensive website intelligence system ever built.

Site Discovery & Structure

Domain scan, subdomain discovery, sitemap parsing, robots.txt scan, route discovery, page crawl, internal/external link inventory, redirect detection, broken-link detection, HTTP status collection.

Page Intelligence

Canonical URLs, page titles, meta-descriptions, heading & section-heading collection, page-text extraction, content-block extraction, page-purpose and page-type classification.

Navigation Mapping

Header, footer, sidebar & breadcrumb menus; button, link, CTA discovery; modal, dialog, accordion, tab, dropdown, carousel & pagination control detection.

UI Element & Form Intelligence

Complete form discovery — fields, inputs, selects, checkboxes, radio buttons, text areas, submit & search controls; disabled, hidden, visibility & interactive-state detection.

Accessibility & DOM

Element IDs, DOM anchors, ARIA labels, accessible names, visible labels, data attributes, element roles, types, states, bounding boxes, screen positions.

Flow & Workflow Mapping

Authentication, signup, login, purchase, cart, checkout, lead-gen, multi-step workflows; required fields, validation rules, error messages, success & confirmation states.

Plus: Pointer System · Layout Intelligence · Content & Product · Brand & Schema · Site World Compilation · Change Detection · Scan Management · ORB Configuration Generation

The Product is Live. The Numbers Are Real.

ORB WEAVER OUTPUT

The Site World: A Complete Machine- Readable Brain for Any Website.

Every ORB Weaver scan compiles into a structured, versioned Site World package — ready for immediate AI deployment.

FINAL OUTPUT ARTII

Compiled Site Package Endpoint Map
Pointer Audit Route Audit Workflow Audit
Website Intelligence ORB Deployment Data
ORB Update Data

Site Knowledge Graph

Full page-to-page, product-to-page, service-to-page, FAQ-to-page & control-to-workflow relationship mapping. Site terminology, synonyms, aliases, and visitor-language alias mapping included.

Complete Capsule Set

Route, page, section, control, product, service & workflow capsules — one structured data unit per site element, forming a complete machine-readable anatomy.

Intent and Capability Mapping

Intent-to-page, intent-to-section, intent-to-control & intent-to-workflow maps. Tool-to-capability, capability-to-route & capability-to-control binding. Stage mapping & Stage Governor input generation.

ORB Configuration Artifacts

Auto-generated site-specific ORB knowledge, tool configuration, pointer configuration, navigation configuration, workflow configuration, articulation context & ORB capability snapshot.

Provenance and Scan Management

Scan timestamping, version tracking, provenance tracking, confidence scoring, result validation, deduplication, normalization, indexing, persistence & full audit logging.

Precision Targeting for AI Navigation.

ORB Weaver builds the world's only automated pointer intelligence layer for websites — making AI interaction exact.

What the Pointer System Collects

- Element bounding-box and screen-position collection
- Pointer-target extraction from every interactive element
- Pointer-anchor generation and pointer-manifest generation
- Pointer plot-map generation for full visual targeting
- Pointer-target alias generation (multiple names per target)
- Target-to-route, target-to-section, and target-to-control mapping
- Scroll-target and viewport-target mapping
- Fixed and sticky element detection
- Overlay, z-order, and depth relationship detection
- DOM anchor collection and ARIA-label binding

What This Enables for AI Agents

- Zero-guess interaction — AI clicks exactly the right element every time
- Separate mobile and desktop pointer maps for responsive sites
- Alias resolution — AI understands [login button](#), [sign in](#), and [account access](#) as one target
- Broken, missing, duplicate, and ambiguous target detection before deployment
- Pointer-map refresh when site changes
- Stage-aware targeting — AI knows which pointer belongs to which workflow stage

Zero ambiguity

Always current

Stage-aware

Site Intelligence That **Never Goes Stale.**

ORB Weaver continuously monitors sites and delivers verified refresh packages the moment anything changes.

01

Change Detection Engine

Detects new pages, removed pages, and changed pages. Identifies new, removed, and changed controls, forms, navigation menus, and workflows. Every change is classified, logged, and surfaced.

03

Stale Intelligence Detection

Stale-content, stale-route, broken-target, missing-pointer-target, duplicate-target, and ambiguous-target detection automatically flag issues before they impact AI performance.

02

Targeted Rescan System

Incremental rescans issue targeted-page, targeted-route, and targeted-workflow rescans rather than full re-crawls — fast, surgical, and efficient. Full-site rescan available on demand.

04

Versioned Refresh Delivery

Updated Site World, pointer-map refresh, and incremental ORB update-data delivered as a new versioned intelligence package. Scan provenance preserved across every version.

ORB Intelligence Add-Ons: Extend. Specialize. Dominate.

Core Site World packages unlock a growing ecosystem of specialized intelligence modules — all software, all modular.

**AI BEHAVIOR**
Behavior Packs
Specialized AI behavior modules — e-commerce assistant, support navigator, lead qualifier, booking concierge. Plug-in ORB personality and decision layers for specific use cases.

**SEMANTICS**
Intent Libraries
Pre-built visitor-language alias libraries by vertical — retail, healthcare, SaaS, hospitality, finance. Instant semantic coverage without manual alias authoring.

**PROCESS**
Workflow Modules
Pre-validated flow maps for checkout, onboarding, account management, and support escalation. Drop-in, validated, immediately deployable.

**LOCALIZATION**
Multi-Language Packs
Visitor-language alias expansion for non-English sites. Intent mapping translated and localized per market and region for global reach.

**QA & COMPLIANCE**
Audit & QA Packs
Extended pointer, control, and route audits. Accessibility compliance reports and broken-element remediation guides for dev and QA teams.

**ENTERPRISE**
Enterprise Integration Packs
Stage Governor inputs, ORB capability snapshots, structured endpoint maps, and public API route inventories for enterprise AI orchestration layers.

Four Revenue Pillars. **No Subscriptions. No Hardware.**

ORB Weaver monetizes through licensing, packages, and ecosystem — not monthly billing, not physical product.

\$299 - \$2,499 / site

Site Intelligence Packages

Per-site compiled **Site World** packages licensed by scale and complexity. Refresh packages sold separately. Volume tiers for agencies and resellers.

✓ Core revenue driver

À la carte + 30% fee

Add-On Ecosystem

Behavior packs, intent libraries, workflow modules, audit packs, and enterprise integration packs. **30% platform fee** on all third-party add-on sales.

✓ Marketplace flywheel

Annual license

Enterprise Engine License

For enterprise teams running ORB Weaver at scale. Includes **bulk scan credits, priority processing, SLA support**, and unlimited refresh packages.

✓ High-ACV anchor

OEM licensing

White-Label Platform License

OEM licensing of the scanning and compilation engine for **AI agent platforms, automation vendors**, and enterprise software embedding site intelligence natively.

✓ Highest-leverage channel

\$ **82%+** TARGET GROSS MARGIN

- **Zero cost of goods. Pure software economics.** No manufacturing. No infrastructure COGS. All four pillars operate at identical margin — every dollar of revenue drops nearly entirely to gross profit.

- ✓ No manufacturing
- ✓ No infrastructure COGS
- ✓ No subscriptions required

Revenue Projections: 2026-2032

Conservative package adoption. Ecosystem and white-label upside not fully modeled.

↗ **\$110M projected Year 7 revenue** ☆ **82%+ gross margin** ⚠ **1.1× ecosystem-to-package ratio by 2032** by 🟡 Site Packages & Enterprise License 🟠 Add-On Ecosystem & White-Label

\$110M
\$82M
\$55M
\$27M
\$0

Projections based on 0.005% of live website TAM at scale. White-label OEM revenue not included in base case. Enterprise license assumed at 3% of total package volume.

We Are Building the Intelligence Layer of the Agentic Web.

Every AI agent needs a map. We build the map.

\$3.5M Pre-Seed Round Currently Open

Pre-money valuation: \$18M

Structure: SAFE

Join at the inflection point — before the agentic web demands the infrastructure we are already building.

Use of Funds

Strategic Moat

- Proprietary pointer system for machine-readable site knowledge
- Site World compilation IP — the only structured map of agentic surface area
- First-mover position in agentic site intelligence at infrastructure layer
